

How do you save energy without burning your profits? We can help.

REBOX® Oxyfuel. Solutions designed to deliver results while reducing total costs.

Let's face it: energy costs escalate. That's why we recommend you talk to us about your options. We can enlighten you on the fact that applying oxygen combustion in a metallurgical heating or melting process increases process efficiency and saves energy.

Our Oxyfuel-based solutions are designed to help you achieve the same process results with less fuel consumption, reduced harmful emissions and even increased process capacity. It's no wonder there are several hundred AGA Oxyfuel installations within heating and melting applications around the world today.

Call us, we're sure we will be able to help you.

AGA – ideas become solutions.
